CARMEN NAVARRO TIMÓN

From industrial designer to Fullstack Programmer.
I am a Higher Technician in Multiplatform Application Development since December 2020. I have been trained as a fullstack and I am specialised in frontend.
I come from the world of industrial design applied to the cultural sector. I have worked as a freelance and in large teams in museums, theatres, television and cinema.
In these two years of experience in the digital sector, I have worked: as a freelancer doing UX/UI design and front and backend development; I have also collaborated with technology companies specialised in Mixed Reality; and I have been a mother again.
I am passionate about the technological universe for its enormous potential both in its ability to increase people's cognitive abilities and improve social behaviours, as well as in its power to generate new experiences, transmit new sensations and emotions.
